

# Capstone Project - The Battle of Neighborhoods (Week 2)

## 1 Introduction

Investment is in general a complex and challenging task. One of the most difficulty is to collect right data. Today there are certainly lots of data sources thanks to internet data centers developpement ,data processing technologies which make it possible to collect, process and store data in real time. Although these technologies are present in our day life and more often availables as open source tools, they still need to be carefully used in other to obtain right data.

### 1.1 PROBLEM

*The problem as set consists collecting ,porcessing and analyzing the cities **NEW YORK CITY, Toronto And Paris**. More precisely ,the problem is about Collecting informations about all the venues of different neighborhood of all borough in each of these cities in order to find the similarities between them base on data collected using data anlysis tools ,here is python and external API such as foursquar. The result obtained results will be use to suggest a suitable location for investment .*

### 1.2 interest

Evidently, interested are either poeple interested in investing in one of these tree cities or somme one willing to know a litle bit about kaind of venues in these cities.

### 1.3 Data socuces

#### 1.3.1 PROBLEM 1 CITIES ANLYSIS

##### 1.3.1.1-NYC(new york city) all data where provided

Link to the data set: [\[https://cocl.us/new\\_york\\_dataset\]](https://cocl.us/new_york_dataset)

*From this link data are downloaded using python api pandas ,process and transform into usable data format. The foursquare API is then used to generate the final data set including geografical coordinate of each neighbouhood. Thinal data set in the generated (Data frame including geographical coordinates of each neighborhood.*

##### 1.3.1.2 -Toronto links To

**dataset:** [\[https://en.wikipedia.org/wiki/List\\_of\\_postal\\_codes\\_of\\_Canada:\\_M](https://en.wikipedia.org/wiki/List_of_postal_codes_of_Canada:_M) - [http://cocl.us/Geospatial\\_data\]](http://cocl.us/Geospatial_data)

*From this link data are downloaded usind python api pandas ,process and transform into usable data format. The foursquare API is then used to generate the final data set including geografical coordinate of each neighbouhood. Thinal data set in the generated (Data frame including geographical coordinates of each neighborhood.*

##### 1.3.1.3 Paris links to data

**sets:** [\[https://fr.wikipedia.org/wiki/Liste\\_des\\_quartiers\\_administratifs\\_de\\_Paris](https://fr.wikipedia.org/wiki/Liste_des_quartiers_administratifs_de_Paris) [https://opendata.paris.fr/explore/dataset/quartier\\_paris/download/?format=csv&timezone=Europe/Berlin&use\\_labels\\_for\\_header=true&csv\\_separator=%3B\]](https://opendata.paris.fr/explore/dataset/quartier_paris/download/?format=csv&timezone=Europe/Berlin&use_labels_for_header=true&csv_separator=%3B)

From this link data are download ,loded usind python api pandas ,process and transform into usable data format. The foursquare API is then used to generate the final data set including geograflcal coordinate of each neighbouhood.Thinal data set in the generated (Data frame including geographical coordinates of each neighborhood

### 1.3.2 PROBLEM 2 (VENUE SUGESTION FOR RISTAURANT INVESTMENT)

data set used here is the results of the data collected and transform (using python and foursquere api) into strutured and usable data format in the previous section.

## II-DATA COLLECTION , PROCESSING AND ANLYSIS FOR EACH CITY

### II.1 New York City.

#### II.1.1 New york city data collection and tranformation

**New York City (NYC)**, also known as the **City of New York** or simply **New York (NY)**, is the most populous **city** in the United States with polpulation of 8398748 inhabitants.This is the first city on which ours first analisys will be focussed.

**AS** previously said,data are collected from links provided,the programming language used is python on IMD cloud,more precisely IBM service.Thanks to these tools we have colletted and tranformed data from unusable data forrmat to structured data frame.Below is the scrreshut of the final data structure where in the columns we have from left to right exactly :**Borough's name ,Neighborhood's name ,Latitude and Longitude** of the overall newyork city.

*Newyork city data set with geographical coordinates*

	Borough	Neighborhood	Latitude	Longitude
0	Bronx	Wakefield	40.894705	-73.847201
1	Bronx	Co-op City	40.874294	-73.829939
2	Bronx	Eastchester	40.887556	-73.827806
3	Bronx	Fieldston	40.895437	-73.905643
4	Bronx	Riverdale	40.890834	-73.912585

The total number of Neighborhood in newyork city is : **103**

Using External fousquare API and further processing data are transformed in the usable the final data structure wifhi can be seen in the following.

The total number of venues in newyork city is : 1.22 per 100 inhabitants.

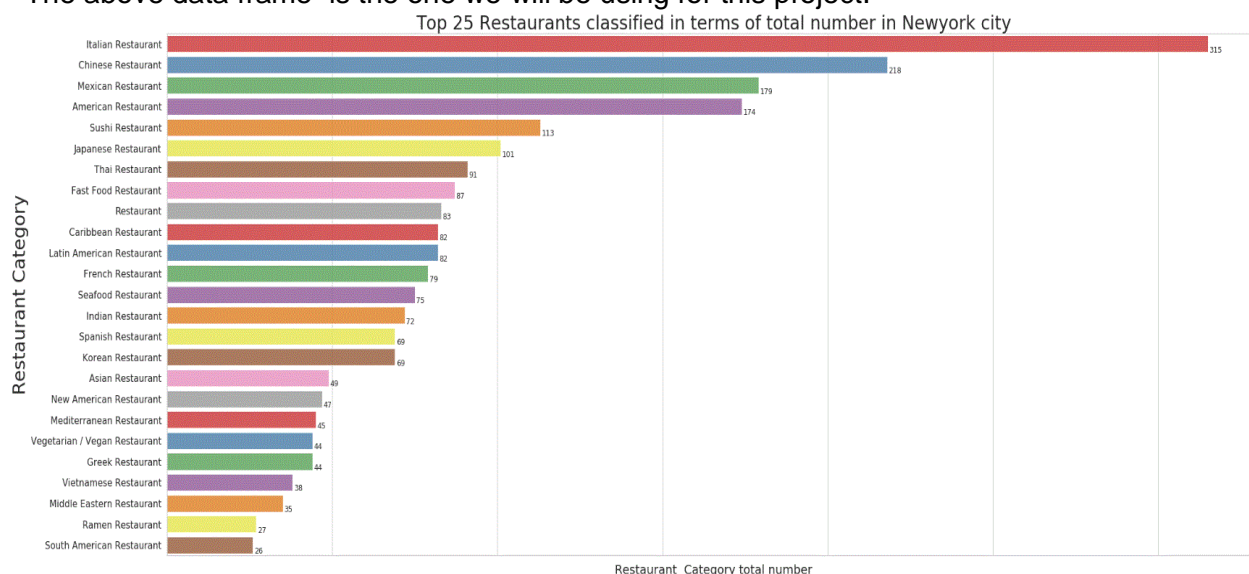

**Table including venue categorie**

	Neighborhood	Neighborhood	Latitude	Neighborhood	Longitude	venue	venue	venue	venue
							Latitude	Longitude	Category
0	Wakefield		40.894705		-73.847201	Lollipops Gelato	40.894123	-73.845892	Dessert Shop
1	Wakefield		40.894705		-73.847201	Rite Aid	40.896649	-73.844846	Pharmacy
2	Wakefield		40.894705		-73.847201	Carvel Ice Cream	40.890487	-73.848568	Ice Cream Shop
3	Wakefield		40.894705		-73.847201	Dunkin'	40.890459	-73.849089	Donut Shop
4	Wakefield		40.894705		-73.847201	Shell	40.894187	-73.845862	Gas Station

In terms of venues diversity, there are 429 venue categories.

As we are interested in this analysis in investing on a Restaurant, we need to extract from the dataframe only rows corresponding to restaurant venues. Final data in the following is shown the first 5 elements of the final table.

The above data frame is the one we will be using for this project.

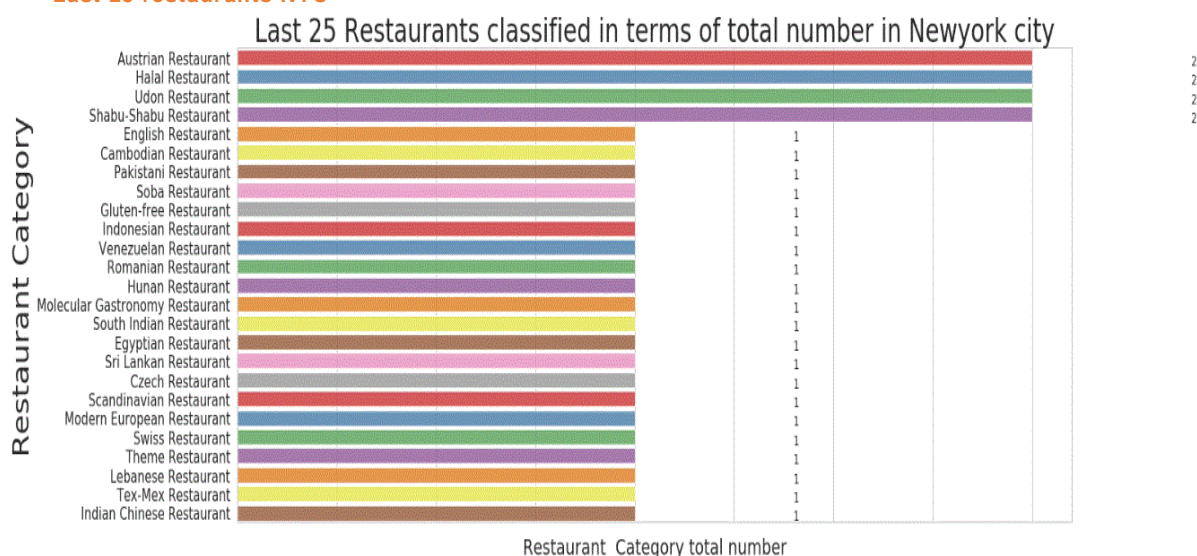

### Top 25 restaurants NYC

Herlet plot the top 25 and the 25 last restaurants in terms of number of restaurant in New York city.

With 315 restaurants in NYC, Italian restaurant in terms of number is the most represented, followed by Chinese, Mexican and American Restaurant with total number respectively 219, 179, 174 and 113. Unexpectedly, the Italian restaurant comes first in USA.

### Last 25 restaurants NYC

This last graph shows that, in NYC, there are lots of restaurant categories with only one building such as Indian Chinese restaurant, South Indian Restaurant, and so on.

Let look a little bit deeper into the data set. Here below are the top five venues for 6 neighborhoods in New York city.

----Allerton----			----Arrochar----			----Astoria----		
	venue	freq		venue	freq		venue	freq
0	Chinese Restaurant	0.33	0	Italian Restaurant	0.4	0	Middle Eastern Restaurant	0.17
1	American Restaurant	0.17	1	Mediterranean Restaurant	0.2	1	Greek Restaurant	0.14
2	Fast Food Restaurant	0.17	2	Middle Eastern Restaurant	0.2	2	Seafood Restaurant	0.11
3	Mexican Restaurant	0.17	3	Polish Restaurant	0.2	3	Mediterranean Restaurant	0.08
4	Spanish Restaurant	0.17	4	Afghan Restaurant	0.0	4	Japanese Restaurant	0.06

----Annadale----			----Arverne----			----Astoria Heights----		
	venue	freq		venue	freq		venue	freq
0	Restaurant	0.5	0	Thai Restaurant	1.0	0	Italian Restaurant	1.0
1	Sushi Restaurant	0.5	1	Afghan Restaurant	0.0	1	Afghan Restaurant	0.0
2	Afghan Restaurant	0.0	2	Moroccan Restaurant	0.0	2	New American Restaurant	0.0
3	New American Restaurant	0.0	3	Romanian Restaurant	0.0	3	Russian Restaurant	0.0
4	Romanian Restaurant	0.0	4	Restaurant	0.0	4	Romanian Restaurant	0.0

In this project, our analysis will be totally dedicated to Restaurant, thus they will be used in the first time to seek the similarity and dissimilarity between New York city, Toronto and Paris and secondly with deeper analysis will be used to suggest the most appropriate place if not an acceptable place to invest in restaurant event which Restaurant category may be the best choice according to our analysis.

Let create a new data frame with the 10 most common restaurants as following.

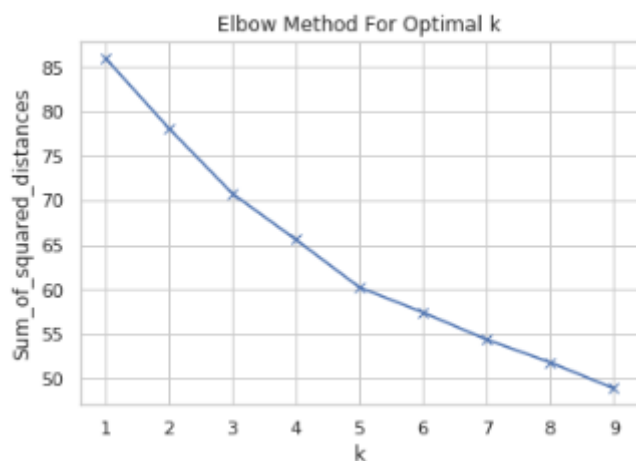

Neighborhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
0 Allerton	Chinese Restaurant	American Restaurant	Fast Food Restaurant	Mexican Restaurant	Spanish Restaurant	Vietnamese Restaurant	Greek Restaurant	Ethiopian Restaurant	Falafel Restaurant	Filipino Restaurant
1 Annadale	Restaurant	Sushi Restaurant	Vietnamese Restaurant	Egyptian Restaurant	English Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant
2 Arrochar	Italian Restaurant	Polish Restaurant	Mediterranean Restaurant	Middle Eastern Restaurant	Greek Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant
3 Arverne	Thai Restaurant	Vietnamese Restaurant	Halal Restaurant	English Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant
4 Astoria	Middle Eastern Restaurant	Greek Restaurant	Seafood Restaurant	Mediterranean Restaurant	Italian Restaurant	Japanese Restaurant	Indian Restaurant	Sushi Restaurant	Mexican Restaurant	Comfort Food Restaurant

In the next section, we are going to use this data to group the data set into different clusters.

## II.1.2-Clustering (K-mean) :

### II.1.2.1-Parameter turning (Best k parameter for kmeans).

The first step of our clustering is to choose the appropriate value of  $k$  (number of cluster).

best k for the kmean cluster 1, best k =5

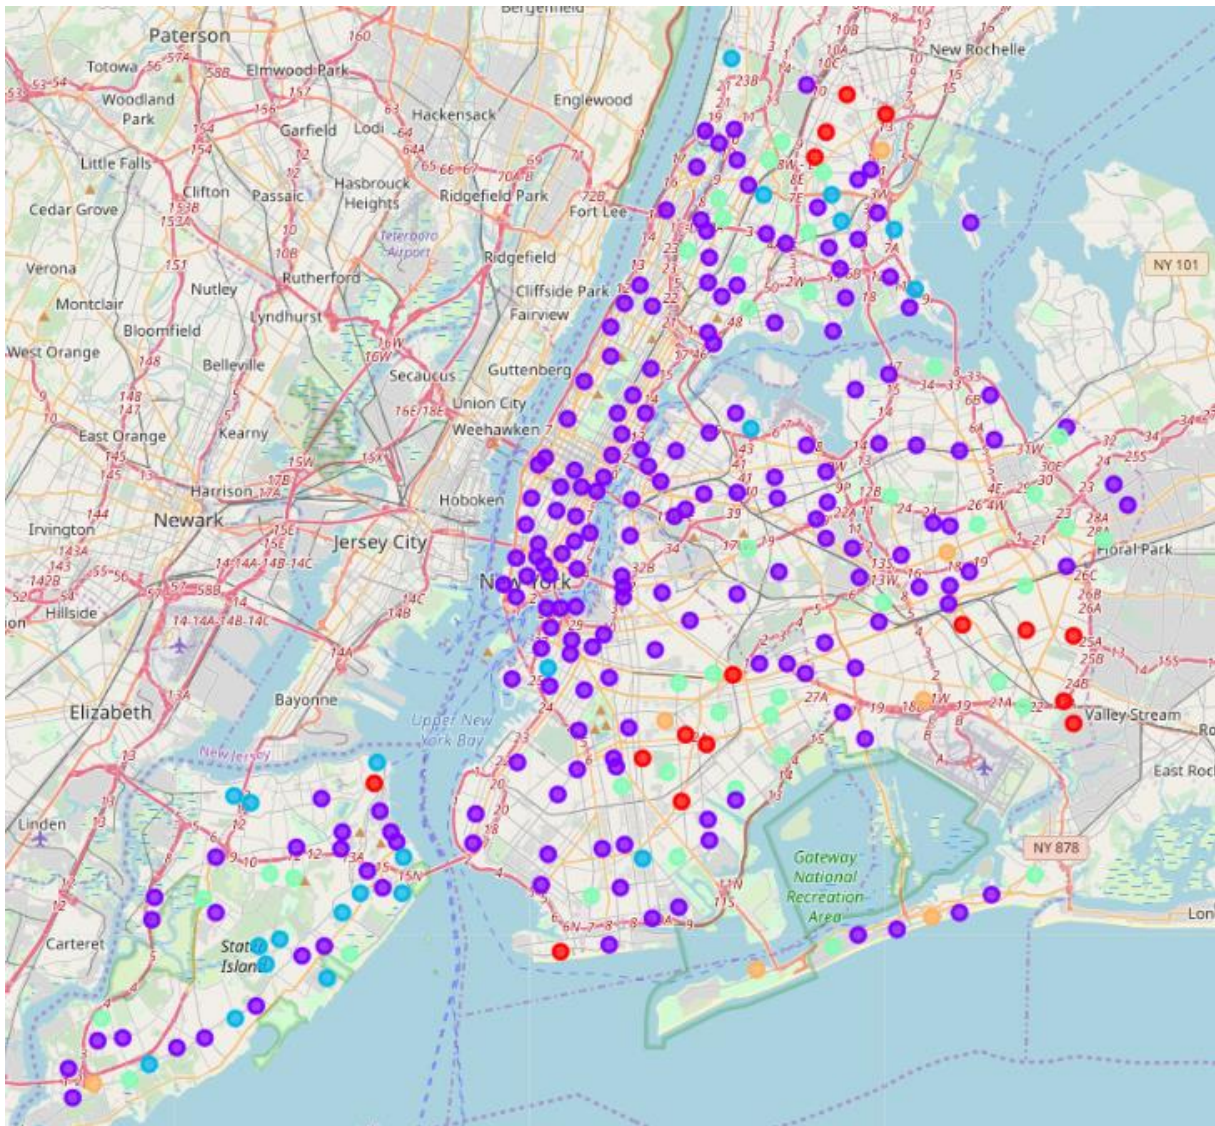

In the plot above the elbow is at  $k=5$  indicating the optimal  $k$  for this dataset is 5

### II.1.2.2-Model fitting

This section consists in clustering the Newyork city data set using the best value of  $k$  obtained in the parameter turning section. In the below figure :[ best k for the kmeans cluster in the Newyork City map] are the different neighborhoods clusters.

### best k for the kmeans cluster in the Newyork City map

In the tables(*table cluster 1 NYC,table cluster 2 NYC,table cluster 3 NYC,table cluster 4 NYC,Table cluster 5 NYC*) are these obtained cluster with the overall information on them.

In the following table, the neighborhoods present in the same cluster are close to each other, thus they share most of the common restaurants. For instance, as the neighborhoods **Wakefield** and **Eastchester** it means the share lot of most common restaurants categories. Similarly, the neighborhoods present in different clusters may share fewer most common restaurants of the most common restaurants. Let print the first rows of our clusters.

nmon Venue

0	Wakefield	Caribbean Restaurant	Vietnamese Restaurant	Halal Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant	Gluten-free Restaurant
2	Eastchester	Caribbean Restaurant	Seafood Restaurant	Fast Food Restaurant	Chinese Restaurant	Vietnamese Restaurant	Empanada Restaurant	Ethiopian Restaurant	Falafel Restaurant	Filipino Restaurant	French Restaurant
9	Williamsbridge	Caribbean Restaurant	Vietnamese Restaurant	Halal Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant	Gluten-free Restaurant
41	Olinville	Caribbean Restaurant	Chinese Restaurant	Vietnamese Restaurant	Empanada Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant
75	Flatlands	Fast Food Restaurant	Caribbean Restaurant	Chinese Restaurant	Vietnamese Restaurant	Empanada Restaurant	Ethiopian Restaurant	Falafel Restaurant	Filipino Restaurant	French Restaurant	German Restaurant
78	Coney Island	Caribbean Restaurant	Vegetarian / Vegan Restaurant	Vietnamese Restaurant	Greek Restaurant	English Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant
164	South Jamaica	Vegetarian / Vegan Restaurant	Caribbean Restaurant	Vietnamese Restaurant	Greek Restaurant	English Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant
165	St Albans	Caribbean Restaurant	Fast Food Restaurant	Chinese Restaurant	Vietnamese Restaurant	Empanada Restaurant	Ethiopian Restaurant	Falafel Restaurant	Filipino Restaurant	French Restaurant	German Restaurant
168	Cambria Heights	Caribbean Restaurant	Chinese Restaurant	Vietnamese Restaurant	Empanada Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant
169	Rosedale	Chinese Restaurant	Caribbean Restaurant	Vietnamese Restaurant	Empanada Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant
188	Laurelton	Caribbean Restaurant	Vietnamese Restaurant	Halal Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant	Gluten-free Restaurant
218	Tompkinsville	Mexican Restaurant	Caribbean Restaurant	Vietnamese Restaurant	Halal Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant
223	Rugby	Caribbean Restaurant	Seafood Restaurant	Chinese Restaurant	Vietnamese Restaurant	Empanada Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant
259	Rensselaer Village	Caribbean Restaurant	Fast Food Restaurant	Vietnamese Restaurant	Halal Restaurant	Ethiopian Restaurant	Falafel Restaurant	Filipino Restaurant	French Restaurant	German Restaurant	Gluten-free Restaurant
282	Broadway Junction	Caribbean Restaurant	Vietnamese Restaurant	Halal Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant	Gluten-free Restaurant
300	Erasmus	Caribbean Restaurant	Vietnamese Restaurant	Halal Restaurant	Ethiopian Restaurant	Falafel Restaurant	Fast Food Restaurant	Filipino Restaurant	French Restaurant	German Restaurant	Gluten-free Restaurant

Table cluster 2 NYC

	Neighborhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue

## II.2 Toronto

### II.2.1-Toronto Data collection and transformation

The City of **Toronto** Is the Canada's largest city, the fourth largest in North America with a population of 6196731 inhabitants. Data for this analysis were obtained using web crawling python API and secondly processed using the same processing methods described in the previous city analysis (NYC). For this new city, making the same analysis as the one previously described in the section NYC DATA analysis produces the following results.

	Neighborhood	Neighborhood Latitude	Neighborhood Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category
0	Rouge, Malvern	43.806688	-79.194353	Wendy's	43.807448	-79.199058	Fast Food Restaurant
1	Rouge, Malvern	43.806688	-79.194353	Interprovincial Group	43.805630	-79.200378	Print Shop
2	Highland Creek, Rouge Hill, Port Union	43.784535	-79.160497	Chris Effects Painting	43.784343	-79.163742	Construction & Landscaping
3	Highland Creek, Rouge Hill, Port Union	43.784535	-79.160497	Royal Canadian Legion	43.782533	-79.163085	Bar
4	Highland Creek, Rouge Hill, Port Union	43.784535	-79.160497	Affordable Toronto Movers	43.787919	-79.162977	Moving Target

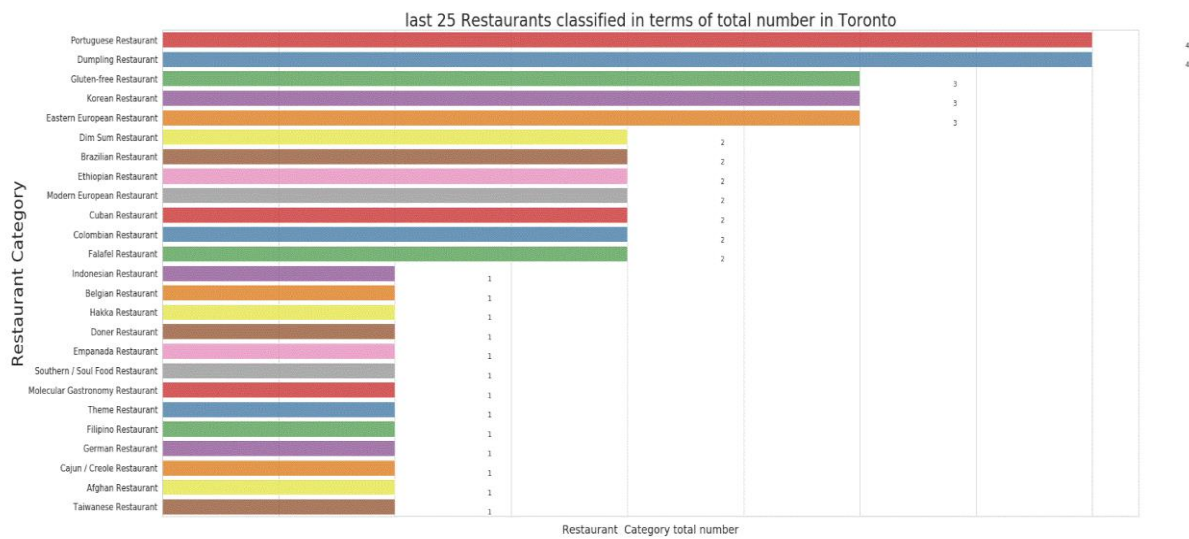

Final data structure including only the first rows :

As shown by the above graphical representation, Italian Restaurant still the most represented restaurants, followed by Japanese, Fast food, American.

Seafood Restaurant ect.. with respectively 64, 48, 37, 30 and 26 restaurants in Toronto city.

## Top 25 restaurants Toronto

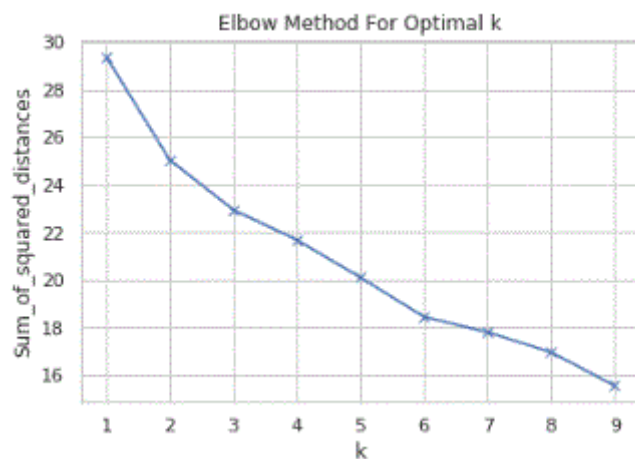

## Last 25 restaurants Toronto

For the last 25 restaurants category, they are 13 with only 1 restaurant, interesting for investment as they are few restaurants in these categories.

Let look a little bit deeper into the data set. Here below are the top five venues for 6 neighborhoods in Toronto city

## II.2.2-Clustering

### II.2.2.1-Parameter turning(Toronto)

## II.2.2.1-Model fitting(kmeans)

best k for the kmeans cluster in the Toronto City m

## II.3 Paris

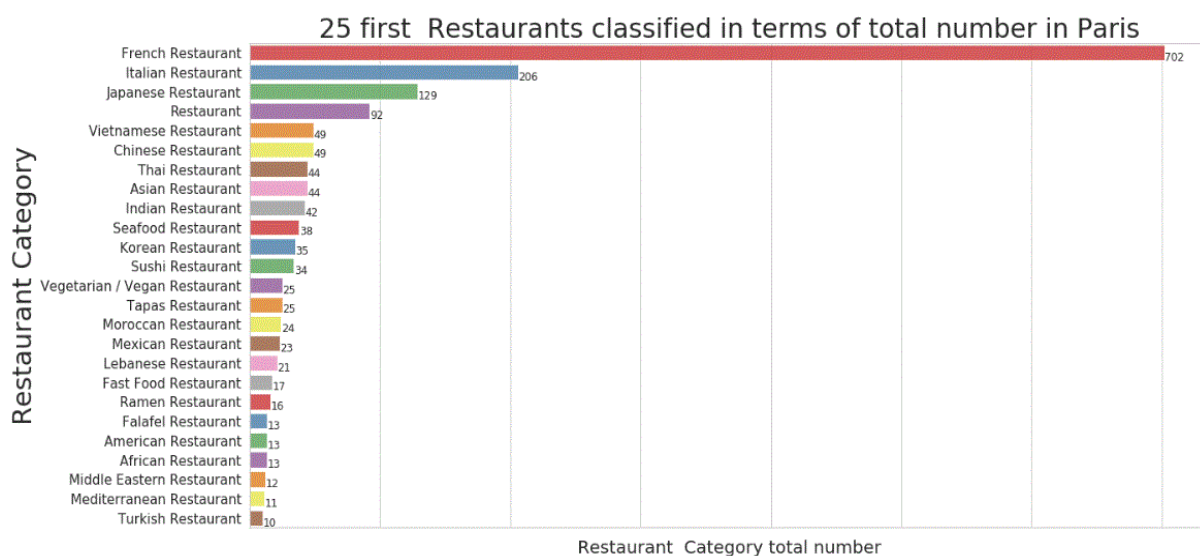

### II.3.1 Paris Data collection and transformation

**Paris** is the **capital** and **most populous city** of **France**, with a **population** of 2,148,271 residents (official estimate, 1 January 2020) in an area of 105 square kilometres (41 square

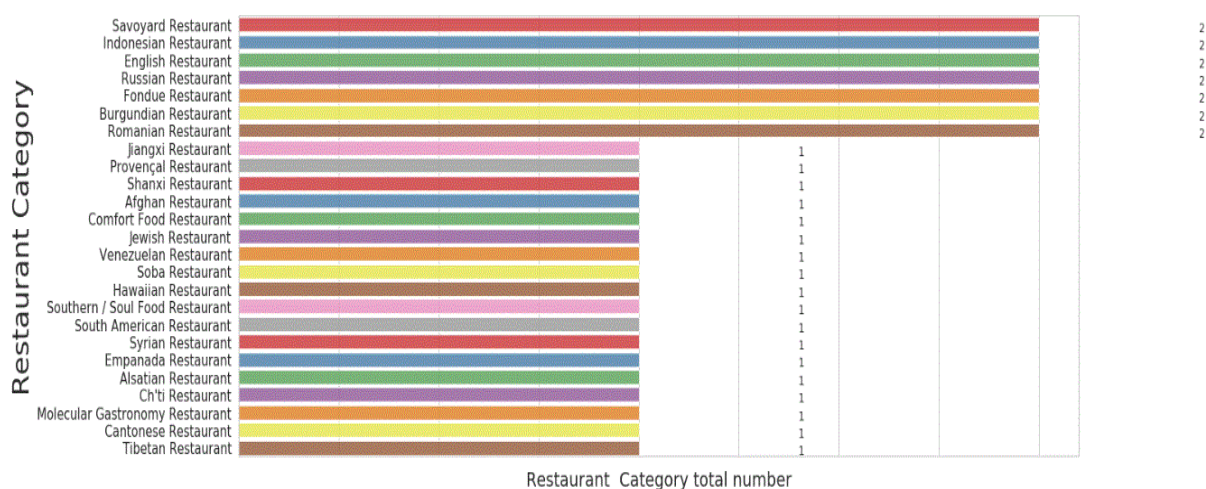

miles).The data collection and transformation is done using the same techniques as previously describe for the two other cities(NYC and Toronto).The final data structure is :

	Neighborhood	Neighborhood Latitude	Neighborhood Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category
0	Amérique	48.881638	2.39544	Aux Petits Joueurs	48.880435	2.396212	Bistro
1	Amérique	48.881638	2.39544	Brasserie Le Danube	48.882164	2.393235	French Restaurant

## VI .Comparative of the tree cities(Paris,Tronto,NYC)

The data collection ad processing describes in the previous section produce the following information .The analisys will be base on Population(Total number of inhabitants in the city),Venues number,Venus number per 10000 inhabitants,unique Venus,Total number of restautant,Restaurants number per10000 inhabitants,unique restaurant number as shown in the following table

Table including informations on the on the tree cities analysed

City	Population	Venues number	Venues number per 10000 inhabitants	Unique venue's categories number	Total Restorants number	Restautant1 per 10000 inhabitants	Total restaurant unique categories
NYC	8398748	10255	12,2	429	2580	3	92
Toronto	6196731	2213	3,57	276	503	0,8	48
Paris	2148271	5482	25	305	1866	8,5	79

To make things a little bit more clear, let's look at the following figure. To well understand what is in question here.

The most populated city here is NYC with 8,398,748 inhabitants followed by Toronto and Paris with respectively 6,196,731 and 2,148,271 inhabitants.

As our interest here is particularly restaurant we have respectively 2580, 503, 1866. Thus a restaurant density (Restaurants number for 10,000 inhabitants) of respectively 3; 0.8 and 8.5. In terms of restaurant diversity, the New York City is the best having 92 restaurant categories followed by Paris with 79 restaurants categories.

## **V Conclusion .**

At the end of our investigation, thanks to data we collected using data processing tools and IBM cloud, the Toronto city being the less dense (0.8 restaurant for 10,000 inhabitants) can be seen as the best place to invest if we take into account only this criterion thus the restaurant demand compared to the city Paris and New York City having already lots of restaurants. From the Toronto city analysis, there are 13 restaurant categories with only 1 restaurant and 7 with only two to those categories may be interesting in the sense they are few. Investing in the restaurant such as German Restaurant, Taiwanese Restaurant, Modern European restaurant may be a good investment.
